

BEN HE

Toronto, ON | (647) 861-9508 | hejingyu1104@gmail.com

SUMMARY

Graduate with a background in React.js and JavaScript development. Created a full-stack Human Capital Management system for a capstone project. Interested in a software development internship to expand skills and work on practical applications.

SKILLS

- HTML and CSS Python Typescript Tanstack
- Version control pgsql
- React development

TECHNICAL PROJECT

09/2025 - 04/2026

Restaurant HCM System Team Capstone Project

- Contributed to a full-stack Human Capital Management system for restaurant operations
- System included employee scheduling, payroll calculation, and clock-in/clock-out modules
- Collaborated with team members to prepare project documentation, discuss development plans, and complete assigned tasks

05/2027

Hackathon: ARI. Software & Claude Code

- The hardest part was making the AI (Claude) always return clean, correct data — not messy text — every single time, so the apps could use it safely.
- I had to build strong data rules so each user only sees their own negotiation history, and no one can see others' private data.
- I designed a system where users can change the AI's tone (soft to aggressive) with one slider, and the AI has to follow that tone correctly every time.

06/2026

Canadian IT Job Market Analysis Dashboard

- Collected and cleaned real job data from an API, handling missing salaries, messy locations, and unstructured text to pull out clean skills and job details.
- Built an interactive dashboard with many filters and charts (salary, skills, remote work, company) that all update together in real time
- Designed a job-matching feature that scores and ranks job listings based on a user's own skills

EDUCATION AND TRAINING

09/2023 - 06/2026

Diploma: Computer Programming & Analysis

George Brown College - Toronto

- **Built a Task Management System** (implementing CRUD operations, status filtering,

and component-based architecture)

- **Develop a job posting board** (using Tan Stack Query for data requests and dynamic queries).
- **Created a Weather App** that displays real-time weather data from external APIs.
- **Implemented user authentication features**, including registration and login, using Node.js and RESTful APIs.
- **Developed back-end services** and business logic using Java.
- **Built a mobile shopping cart application** with local data storage functionality.
